

100% Renewable for One Real Week

An Interactive Exhibit on Electricity Supply and Demand

Exploring how wind and solar generation compare to electricity demand over a real week, and where surpluses and deficits arise in a 100% renewable system.

Real-World Data

Uses actual wind, solar, and electricity demand data for one full week (168 hours).

Interactive Exploration

Visualize supply, demand, surpluses, and deficits with adjustable settings.

Key Questions

What does a 100% renewable system look like? When do surpluses and deficits occur? What are the implications?

Broader Context

Connects to the economics of renewable energy, grid reliability, and the transition to a low-carbon future.
